FOREWORD

During 1999, in spite of NATO aggression on Yugoslavia and the destruction of one of the Belgrade Observatory's fundamental instruments - the Large Meridian Circle during a NATO aggressors air attack (on May 13th), 112 bibliographic items have been published by the Observatory's fellows, 23 of which in international scientific journals of highest rank, 3 in books issued by international publishers, 22 in national scientific journals, 42 as contributed papers at international and national conferences and 8 in the IAU circulars. Six invited lectures have been given by the Observatory's fellows at international conferences and five at the national ones. In addition, two Ph.D. Theses and one M.Sc. Thesis have been published.

Numbers 159 and 160 of the Observatory's publication SERBIAN ASTRONOMICAL JOURNAL, as well as Nos. 63, 64, 65 and 66 of the PUBLICATIONS OF THE ASTRONOMICAL OBSERVATORY OF BELGRADE have been issued. These publications are regularly sent to 136 scientific institutions and libraries in 45 countries throughout the world and to 15 institutions and libraries within Yugoslavia.

Observatory's fellows took part in works of 8 scientific conferences abroad (9 participations by 6 fellows) and 3 conferences in Yugoslavia (35 participation by 22 fellows).

Belgrade Observatory organized, or took part in the organization of, the following conferences:

1. III Yugoslav Conference on Spectral Line Shapes, Brankovac (Fruška gora), 4-6. Oct. 1999.
2. XII National Conference of Yugoslav Astronomers and International Workshop on the Development of Astronomical Databases, Belgrade, 19-21. Nov. 1999.
3. Simpozijum Milanković - juče, danas, sutra (Symposium Milanković - yesterday, today, tomorrow), Belgrade, 25-26. Nov. 1999.

During 1998-99, Observatory's fellows continued collaboration with their colleagues in Argentina, Australia, Austria, Belarus, Belgium, Brazil, Bulgaria, Finland, France, Germany, Greece, Hungary, Italy, Japan, New Zealand, Northern Ireland, Romania, Russia, Slovakia, Spain, Sweden, Turkey, Ukraina, USA and Uzbekistan.

Besides numerous newspaper articles, radio and TV emissions Observatory's fellows authored, they gave 48 lectures on astronomical subjects outside our institution, thus contributing to the cultural life in our country. In addition, 4 lectures were given at the Astronomical Observatory itself.

As from 1998 Astronomical Observatory maintains internet connection available from each one of the personal computer at the Observatory with Windows 95 installed. I note also that Serbian Astronomical Journal is available on www through the Astrophysical Data System (ADS), thanks to the courtesy of the System's holders. The www address is: <http://adswww.harvard.edu/~BOBeo>. During 1999, the web site of the Belgrade Astronomical Observatory has been made and the corresponding www address is: <http://www.aob.bg.ac.yu>. Moreover, the database BELDATA has started developing, being available through internet at the address:
<http://www.aob.bg.ac.yu/BELDATA>.

1. SOME OF THE MAIN RESULTS OF THE OBSERVATORY'S RESEARCH ACTIVITY

On the 13th of May 1999, about 13^h 30^m, during an air attack of NATO aggressors, the Large Meridian Circle of the Belgrade Astronomical Observatory has been destroyed. Seven stellar catalogues have been produced on this instrument, which, for this very reason, was put to the central and foremost place in our plans for modernization of our astronomical instruments.

In spite of NATO aggression, fellows of Belgrade Observatory have continued during 1999 contributing to collective research efforts of international astronomical community. Since the contributions published in international journals and results of observational programs are of particular interest to the astronomical community, I propose here to present a review of just these achievements.

Blagojević, Popović, Konjević and Dimitrijević (1999) reported on the results of theoretical and experimental study of Stark broadening and shifting of analogous spectral lines along the lithium ($3s^2S - 3p^2P^o$) and beryllium ($3s^3S - 3p^3P^o$) iso-electronic sequences. For the evaluation of Stark broadening parameters the impact semiclassical method is used. The Stark widths and shifts along both sequences are measured in the plasma of a low-pressure pulsed arc. Plasma electron densities were determined from the width of the He II P_α line while electron temperatures were measured from the relative line intensities. Both experiments agree within estimated uncertainties with our semiclassical results. Although the overall agreement between theory and experiments is found, gradual change of the discrepancy for the widths along the sequence is detected. The comparison of experimental Stark shifts with the theoretical ones shows that the magnitude and direction of line shifts along the Li-sequence may not always be predicted by theory. The comparison of experimental Stark widths along the Be-sequence for B II, C III, N IV and O V with semiclassical theory shows a similar tendency. The discrepancy with theory is large for the B II and it is improved for higher members of the sequence. The only measured Stark shifts for N IV and O V are of different signs (red for N IV and blue for O V), and this change of sign along the sequence cannot be explained by the theory.

Ćirković (1998/99) and Ćirković and Yurchenko (1998/99) have investigated the structure and dynamics of the gaseous galactic haloes, recently discovered observationally around a large part of low- and intermediate-redshift normal galaxies through redshift-coincidence studies of the QSO absorption spectra. If such gaseous haloes are generic phenomena (which is in accordance with currently intensely investigated theories of hierarchical structure formation), it is to be expected that they manifest themselves in several ways. In particular, the hypothesis that the same class of objects is responsible for both Ly α (and metal-line absorption systems) puts some constraints on the theoretical density profiles of gas in such haloes, as pointed out by Ćirković

(1998/99) at the instance of models for metal-absorbing haloes recently put forward by Srianand and Khare. Two observational facts are important to keep in mind in any such analysis: the column density vs. impact parameter relation inferred from coincidence studies, and the maximal total mass of gas which could be located in galactic haloes (which is actually a set of constraints following from the studies of galactic dynamics, diffuse X-ray emission data, as well as the primordial nucleosynthesis). The preliminary conclusion seems to be that no single power-law density profile can satisfactorily account for both metal and Ly_α absorption line populations; however, our very poor knowledge of the chemical evolution of halo matter somewhat weakens this conclusion and makes further work in this direction a necessity. On the other hand, Ćirković and Yurchenko (1998/99) have analyzed the question: what limits can be imposed on the sizes of gaseous haloes of normal galaxies when interaction with environment is taken into account? Thermal pressure of intergalactic medium does not seem to be an important factor; however, the ram pressure confinement is somewhat more promising. However, critical radii for ram-pressure stripping of gas in outer halo are still larger than the maximal empirically established absorption radius for galaxies which are located in the field, i.e. in not particularly dense environment. The conclusion reached is that field galaxies could very well be approximated as isolated structures, and the environment does not play any significant role in stratification and dynamics of gaseous galactic haloes. This conclusion, however, is valid only for recent epochs. If, as indicated by many more recent observations, the formation of well-defined galaxies occurred much earlier than traditionally thought, this same question might well have had the opposite answer in epochs around $z \sim 3$.

In collaboration with Dr. Jonathan Bland-Hawthorn of the Anglo-Australian Observatory, probably the world's foremost expert on low surface brightness optical recombination emission, Ćirković and Samurović have continued their previous work on the recombination emission lines originating in huge extended gaseous haloes of normal galaxies (Ćirković, Bland-Hawthorn and Samurović 1999). In their communication, they showed that the observation of H_α emission of such a halo of $L \sim L^*$ galaxy at low ($z \sim 0.1$) redshift is feasible with the current level of sensitivity, but it still presents observers with a formidable task (for instance, exposure times required even at the 8m class telescopes are about 10 hours per galaxy), and the choice of targets for such a survey has to be made very discriminatively. These results follow from a generalized expression for intensity of fluorescent radiation caused by ionizations due to the metagalactic ionizing background as a function of redshift. It has been shown that this is not simple classical $(1+z)^{-4}$ relation, but somewhat complicated expression, which is still easily tractable in any particular case. Natural extension of these calculations are those dealing with the effects of strong clumping of matter within the halo. In addition, the necessary observational support for gaseous haloes is expected to come from Chandra orbital X-ray observatory, which will bring new momentum and topicality to this research. Another form of baryonic dark matter presumably hiding in the haloes of spiral galaxies is Massive Compact Halo Objects, commonly known as MACHOs. The properties of MACHO halo of our Galaxy, and, by extension, generic spiral galaxies at $z = 0$, have been the subject of the detailed study by Samurović, Ćirković and Milošević-Zdjelar (1999). This work has been carried out in

the framework of the Belgrade-MACHO project, which enters its third consecutive year of successful work. The focus of this year's work has been the connection between the cosmological density of baryonic dark matter and the MACHO abundance in the Milky Way halo. It has been shown that observationally measured optical depths toward LMC, SMC and Galactic bulge put strong constraints on the total amount of MACHOs within the galactocentric distance of 50 kpc. Coupled with other constraints, like the flatness of the Milky Way rotation curve, baryonic abundance from primordial nucleosynthesis, and the assumptions on the baryonic nature of MACHOs, this limits the range of possible values of the global halo flattening parameter q . High values of q (≥ 0.8) are improbable due to overabundance of baryons in the low redshift census. On the other hand, low values ($q \leq 0.2$) representing extremely flattened haloes are also implausible, because they conflict with the measured optical depths for microlensing. Our best fit, therefore, are moderately flattened haloes with $q \sim 0.6$. In addition, several interesting consequences of this mode of linking local with global cosmological results arose; one of them is the conjecture that only the values in the lower range for Hubble constant ($H_0 \leq 60 \text{ km s}^{-1} \text{ Mpc}^{-1}$) are entirely consistent with the baryonic census. However, it is still not clear how the high- and low-redshift regimes could be smoothly connected, nor what precise profile (including uncertain core radius) of the dark halo is to be employed. Of course, more sophisticated models, including contribution of non-baryonic matter will probably be capable of answering these dilemmas.

Dimitrijević (1999) reviewed results of the efforts of the Belgrade group to provide to astrophysicists and physicists an as much as possible complete set of Stark broadening parameters needed for stellar opacity calculations, stellar atmosphere modeling, abundance determinations and diagnostics of different plasmas in astrophysics, physics and plasma technology. Stark broadening has been considered within the semiclassical perturbation approach and the modified semiempirical method.

Potassium lines are present in Solar and stellar spectra; for example potassium has been found in SN 1987 A eject. This element is a product of alpha processes - neutron capture on slow time scale, and the data on its spectral line broadening parameters in various ionization stages are of interest in considering and modelling of subphotospheric layers. Such data are likewise of interest for the fusion plasmas and laser-produced plasmas research and for the investigation of soft X-ray lasers.

Dimitrijević and Sahal-Bréchot (1999a) have calculated within the semiclassical-perturbation formalism, electron-, proton-, and He III-impact line widths and shifts for 4 K VIII (for temperatures from 200,000 K up to 3,000,000 K and perturber densities 10^{18} cm^{-3} - 10^{22} cm^{-3}) and 30 K IX multiplets (for temperatures from 200,000 K up to 5,000,000 K and perturber densities 10^{18} cm^{-3} - 10^{22} cm^{-3}).

There are no experimental data concerning the Stark broadening of K VIII and K IX spectral lines. There exists, however, a prediction for K IX $4s^2S - 4p^2P^o$ Stark width (Djeniže and Labat, 1996), obtained with the help of established regularities of the Stark widths along Na isoelectronic sequence. For $T = 500,000$ K and an electron density of 10^{17} cm^{-3} , Djeniže and Labat (1996) obtained for the Stark full width (FWHM) the value $0.0057 \pm 25\% \text{ \AA}$, while the present result is 0.0099 \AA . The presented data might be of interest for some problems in stellar and laboratory plasma

research, especially for subphotospheric layers consideration, investigation and modeling of fusion and laser-produced plasmas, and of soft x-ray lasers, as well as for the checking and development of the Stark broadening theory for multicharged ion line shapes, as e.g. for investigations of systematic trends along isoelectronic sequences. Using a semiclassical approach, Dimitrijević and Sahal-Bréchot (1999b) have considered electron-, proton-, and ionized helium-impact line widths and shifts for 20 In III and 2 Tl III multiplets, for perturber density of 10^{17} cm^{-3} and temperatures $T = 20,000 - 500,000 \text{ K}$, and electron-, proton-, and He III-impact line widths and shifts for 2 Pb IV multiplets, for perturber density of 10^{17} cm^{-3} and temperatures $T = 50,000 - 1,000,000 \text{ K}$.

There are no experimental results concerning In III, Tl III and Pb IV. There are however theoretical results for In III $5s^2S-5p^2P^o$ and Tl III $6s^2S-6p^2P^o$ multiplets, obtained within the semiempirical approach. The obtained widths at the temperature of 15000 K are about two times smaller than our lowest value at 20000 K. The corresponding experimental data will be very useful for further development and refinement of the theory of multicharged ion lines, and for Tl III and Pb IV particularly for the investigation of regularities along the isoelectronic sequences.

Calcium lines are present in solar and stellar spectra Adelman and Davis Philip (1992) have found, for example, neutral calcium lines in the Gamma Geminorum spectrum and Trimble (1991) reports the presence of this product of alpha processes in SN 1987 A ejecta. Accordingly, Stark broadening data on neutral calcium spectral lines are of interest for stellar plasma as well as for laboratory plasma research and modeling. Dimitrijević and Sahal-Bréchot (1999c) have calculated within the semiclassical-perturbation formalism electron-, proton-, ionized helium-, ionized magnesium-, ionized silicon-, and ionized iron-impact line widths and shifts for 189 neutral calcium multiplets. Accordingly, the relevant data for all principal perturbers in the solar plasma are provided.

There are two experimental studies reporting on the results of measurements of neutral calcium line Stark broadening parameters. Kusch and Pritschow (1970) have investigated experimentally Stark widths and shifts of four neutral calcium lines from plasma produced in a pulsed capillary discharge, and reported results for an electron density of 10^{18} cm^{-3} . Only for one line (the 5188.8 Å line from the $4p^1P^o-5d^1D$ multiplet) there exists a sufficiently complete set of atomic data needed for an adequate application of our approach. For this line, however, the impact approximation condition is not satisfied for the reported electron density. Hühn and Kusch (1973) published experimental Stark widths for the 4318.6 Å and 4425.4 Å lines from the $4s4p^3P^o - 4p^2\ ^3P$ and $4s4p^3P^o - 4s4d^3D$ multiplets, from plasma produced in a high pressure arc. Only the 4425.4 Å line may be compared with our results. For an electron density of 10^{17} cm^{-3} and the temperature 10,000 K, Hühn and Kusch (1973) obtained for the full width at half maximum the value 0.29 Å, while our result is 1.26 Å. The semiclassical result of Griem (1974) is 1.51 Å. As one can see, the agreement between the experimental result and both theories is very poor. The reasons for such large difference between the experiment and the theory have been discussed in detail in Konjević and Roberts (1976), and the principal point of their remarks on the experiment is the lack of an independent measurement of electron density.

Using the semiclassical perturbation approach, we have calculated electron-, proton- and He II-impact line widths and shifts for 32 Zn I multiplets as a function of temperature and perturber density. The obtained results have been compared with the existing theoretical and experimental data.

Neutral zinc spectral lines are present in stellar (e.g. Sneden *et al.* 1991) and solar (e.g. Biémont and Godefroid 1980, Grevesse 1984) spectra. Therefore, Stark broadening parameters of Zn I lines are of interest for a number of astrophysical problems, e.g. for abundance determinations, as well as for stellar plasma analysis, modeling and diagnostics. Such data are also of interest for laboratory plasma diagnostics, modeling and investigation.

Within the semiclassical-perturbation formalism Dimitrijević and Sahal - Bréchot (1999d) have calculated electron-, proton-, and ionized helium-impact line widths and shifts for 32 neutral zinc multiplets, as the continuation of the project to create a large Stark broadening data set for astrophysical and laboratory plasma research purposes. The agreement of all experiments with the present calculations as well as with other found in the literature is very poor. The ratio of experimental widths of Kusch and Oberschelp (1967) and the theoretical ones vary from 0.25 up to 3.56. The experimental widths of Fishman *et al.* (1979) are two times larger than theoretical values from both approaches. The temperature trend of the experimental widths of Rathore *et al.* (1985) is in such disagreement with both theoretical approaches that the ratios of the measured and calculated Stark widths vary e.g. for the 4722.16 Å line from 2.24 for $T = 13,700$ K up to 0.77 for $T = 18100$ K for the present results, and from 2.02 up to 0.69 for the theoretical values of Dimitrijević and Konjević (1983). For the shift, ratios of experimental values of Rathore *et al.* (1985) and the results of the present calculations vary from 1.24 to 0.46 for the same spectral line.

In the analysis of the Kusch and Oberschelp (1967) experiment, Konjević and Roberts (1976) have found large variations of Stark widths within multiplets, and supposed that this may be caused by the improper treatment of the self-absorption. Moreover, Dimitrijević and Konjević (1983) have shown on the basis of the analysis of Stark width systematic trends within spectral series, that the experimental results of Kusch and Oberschelp (1967) are in disagreement with such trends. Reliable experimental determinations of neutral zinc Stark broadening parameters will be of interest for checking and development of Stark broadening theory.

The study of Djurašević, Zakirov and Erkapić (1999) deals with the problem of the orbital and physical parameters' estimation of the W UMa type eclipsing binary RZ Tauri, based on the interpretation of new photometric U B V R observations. The light curves obtained at the Maidanak Observatory during 1989-91 show a slight asymmetry around secondary minima and a small difference in the height of the successive maxima.

These curves are analysed in the framework of the Roche computer model by applying the inverse-problem method. The analysis shows that RZ Tau system is in an overcontact configuration with $q = m_2/m_1 \sim 0.362$ and $i = 82^\circ.8$, generating total-aunular eclipses. The best fitting is achieved with a bright active region on the secondary star, placed near the neck region between the components, with the temperature contrast between the spotted area and the surrounding photosphere being

$$A_S = T_S/T_2 \sim 1.070.$$

The spectral type of this system (F0 V) defines its behaviour as being between convective and radiative. Therefore Djurašević, Zakirov and Erkapić (1999) treated the gravity-darkening coefficients as free parameters in the inverse problem. The obtained value ($\beta_{1,2} \sim 0.215$) is likely to be appropriate for this case, showing that the common envelope of RZ Tauri is partly convective.

The basic parameters of the system and of the active region are estimated for all individual U, B, V and R light curves.

The paper of Djurašević and Erkapić (1999) concerns the light curve analysis of the active binary system of *OO Aql*. Basic orbital and physical parameters of this system were estimated by analysing photometric observations by Lafta and Grainger and Essam et al. Both groups of observations gave quite different light curves with a conspicuous asymmetry arising from unequal height of successive maxima. A slightly changed programme by Djurašević was applied. The programme was based on the Roche model and it included an option of overcontact configuration and active (bright or dark) spotted regions on the system's components. An inverse-problem method by Djurašević was used to estimate the parameters of the system and the active regions. The light-curve analysis suggested a significant change in the system. For Lafta and Grainger's light curves the analysis of Djurašević and Erkapić (1999) showed the presence of a dark spotted area near the polar region of the primary component. This dark area covered about 22% of the primary's hemisphere. Essam et al.'s light curves had very complex shape. In this case the mechanism of the mass transfer and the exchange of the thermal energy between the components could produce a bright-spot (bs) area on the secondary, near the Lagrange equilibrium point L_1 around the neck region between the stars. To explain a sharp increase of the system's brightness in the B filter immediately after the secondary minimum, Djurašević and Erkapić (1999) had to introduce also a hot-spot (hs) area of high temperature contrast on the secondary. With the increase of the brightness in the V-filter being of much lower intensity, this hot spot region could be taken as a local eruption. The behaviour of the B-V colour index with the orbital phase is in favor of this hypothesis as well.

The obtained results show that the light-curve changes are due to the development and moving of active spot regions on the components.

The paper of Djurašević (1999) is devoted to the problem of the determination of the orbital and physical parameters of the active eclipsing binary *SV Cam* on the basis of the interpretation of photometric observations made by Patkós during the period 1973 – 1981. The problem is solved in two stages: by obtaining a synthetic light curve in the case the parameters of the corresponding Roche model are given *a priori* (direct problem), and by determining the parameters of the model for which the best fit between the synthetic light curve and the observations is achieved (inverse problem). A total of 18 light curves are analysed in the framework of the Roche model, involving two spotted regions on the primary component of the system (Sp G3 V), with the temperature contrast between the spotted area and the surrounding photosphere $A_s = T_s/T_1 = 0.65$. The basic parameters of the system and of the spotted areas are estimated.

According to the obtained results the spotted areas are formed at high latitudes

and cover a significant part of the stellar surface. No clear cyclicity of the system's activity is noted from the analysed observations. There are some indications that the spotted area at high latitudes (above 70°) corresponds to an enhanced activity. Since the system's period is short ($P \sim 0^d.59$), the presence of spotted regions at high latitudes can be explained by the dynamo mechanism for rapid rotators. During the analysed period the spotted areas tend to fall into the specially active longitude sectors at high latitudes, near the stellar polar regions.

The light curve analysis allowed an estimation of the system's parameters and those of the active spotted regions.

In Djurašević, Antonopoulou, Rovithis-Livaniou and Deliyannis (1999), visual (BV) light curves of the RS CVn type binary system *SZ Psc* are presented. The light curves show a period change towards decreasing phases.

New parameters for the system are found based on an analysis of the observed light curves using the Djurašević's inverse-problem method.

The observed light curves of *SZ Psc*, in both observational bands, can be successfully interpreted within the Roche model with three spotted areas on the surface of the more massive component. Characteristics of the spots and a general discussion of the observed light curves and the results are given.

Janot-Pacheco, Jankov, Leister, Hubert, and Floquet (1999), present photometric data and 209 high-resolution, high signal-to-noise ratio optical spectra of the Be star eta Centauri obtained in 1993 and 1995, respectively. Time series analysis of these and other data, performed using the CLEAN, CLEANEST and Fourier Doppler Imaging techniques, show the presence of multiperiodic variations. They are interpreted in terms of low and high order non-radial pulsation modes. A strong frequency of 1.29 c/d is detected in line profile and photometric variations. It is attributed to a mode with $l = 2$. Other high amplitude signals present in spectroscopic data are 1.78 c/d, 3.82 c/d and 4.51 c/d. A frequency of 1.48 c/d appearing in spectroscopic data is compatible with the 1.56 c/d periodicity largely dominant in observations taken prior to 1993. The corresponding "superperiods" for four of the frequencies are commensurate at the 8% level. The star showed period and non-radial pulsation degree variations on timescales as short as 1.5 hour. The dominant mode apparently alternates between $l = 2$ and $l = 4$ every other day during the eight day time span. This could be a modulation linked to the superperiod or to the stellar rotation. The main periodicities detected in our analysis are compatible with the theoretical unstable g modes in SPB variables. Short time scale variability (1-3 hr), typical of high-order p modes is also systematically present.

It was found by Labat, Bukvić and Tankosić (1999) that the metastable atoms diffusing in a parent gas and bombarding a metal electrode, will cause the electric charge to build up on the electrode. The laser resonant pumping of a transition with the metastable lower level will cause depletion of the metastable atoms density, that consequently, alters the electrode potential.

It has been shown that in the case of neon, $1s5$ metastable atoms are predominantly responsible for the appearance of the optovoltaic (OV) signal that is defined as a potential difference between two electrodes equidistant from the discharge. By the laser induced fluorescence method a stationary distribution of metastables, produced

by a discharge and diffusing into a neutral gas, has been measured. The results are supported by a model.

The dependence of the OV signal on the position of the laser beam between the discharge and one of the electrodes has also been measured and a physical model developed.

Large catalogues of asteroid mean elements need to be computed as a first step in the computation of proper elements, used to study asteroid families. The algorithms for this purpose available so far are only accurate to the first order in the masses of the perturbing planets; the mean elements have satisfactory accuracy for most of the asteroid belt, but degraded accuracy in the neighborhoods of the main mean motion resonances, especially the 2 : 1. Milani and Knežević (1999) investigated a number of algorithms capable of improving this approximation; they belong to the two classes of Breiter-type methods and iterative methods. The former are obtained by applying some higher order numerical integration scheme, such as Runge-Kutta, to the differential equation whose solution is a transformation removing the fast angular variables from the equations; they can be used to compute a full second order theory, however, only if the full second order determining function is explicitly computed, and this is computationally too cumbersome for a complicated problem such as the N-body. The latter are fixed point iterative schemes, with the first order theory as an iteration step, used to compute the inverse map from the mean to osculating elements; formally the method is first order, but because they implement a fixed frequency perturbation theory, they are more accurate than conventional single iteration methods; a similar method is already in use in our computation of proper from the mean elements. Many of these methods are tested on a sample of asteroid orbits taken from the Themis family, up to the edge of the 2 : 1 resonance, and the dispersion of the values of the computed mean semimajor axis over 100,000 years is used as quality control. The results of these tests indicate that the iterative methods are superior, in this specific application, to the Breiter methods, in accuracy and reliability. This is understood as the result of the cancellations occurring between second order perturbation terms: the incomplete second order theory, resulting from the use of a Breiter method with the first order determining function only, can be less accurate than complete, fixed frequency theories of the first order. Milani and Knežević (1999) have therefore computed new catalogues of asteroid mean and proper elements, incorporating an iterative algorithm in both steps (osculating to mean and mean to proper elements). This new data set, significantly more reliable even in the previously degraded regions of Themis and Cybele, is in the public domain.

Within the semi-classical approximation chemi-ionization processes during symmetrical atom-Rydberg atom collisions were considered by Mihajlović, Dimitrijević, Ignjatović and Vasiljević (1999), as well as the inverse chemi-recombination processes during the scattering of free electrons by corresponding collisional ion-atom complexes and molecular ions. It was shown that these processes must be taken into account when modeling the low-temperature layers of solar atmosphere and atmospheres of some helium-rich stars.

Ozeren, Doyle and Jevremović (1999) investigate the extent to which the Wilson-Bappu relationship holds for chromospherically active binaries using the Mg II h and

k lines of 41 RS CVn stars observed with IUE. The resulting fits are different from the relationships obtained for single, less active stars. The paralaxes used were those from the Hipparcos catalogue, these give a much better correlation than the magnitudes taken from CABS. Within a particular luminosity class the relationship is good, however it tends to break down when we incorporate objects ranging in luminosity from class I to V. From model calculations it appears that there is very little dependence of the Mg II line width on effective temperature. The line width does however depend on the column mass at the transition region boundary showing increased line width at lower column mass. There is also a dependence on the column mass adopted for the temperature minimum; however, the major and dominant parameter is the surface gravity scaling as $g^{-1/4}$. Within a luminosity class more active objects will show larger lines widths reflecting a higher column mass deeper in the atmosphere, e.g. at the temperature minimum level.

The lines of the ionized rare earth elements (REE) are present in the spectra of CP stars in a wide temperature domain. Usually, REE abundance analysis is based on the lines of the first ions, which have experimentally determined the oscillator strengths, but due to low ionization potentials the second ions of the REE are dominant in stellar atmospheres. The lack of atomic data for the lines of second ions of the REE did not allow to use them for abundance determinations, although line identifications were successful. For example, Cowley (1984) identified Dy III lines in spectra of a few magnetic stars, Cowley and Greenberg (1988) surveyed lines of doubly ionized REE in UV spectra of five magnetic stars, Mathys and Cowley (1992) presented Pr III identification in optical spectra of a number of CP stars. Sadakane (1993) suggested overabundance of La in α CMa and σ Peg, two hot Am-type stars and Ryabchikova et al (1999) provided an identification and quantitative analysis of Eu III lines in the optical spectra of 10 CP stars. The lines of Eu II in the optical spectra of CP stars are usually very strong and lie in the damping part of the curve-of-growth. Since in A-type stars mentioned here Stark broadening is the main pressure broadening mechanism corresponding data on Stark broadening of stellar spectral lines are needed for a number of astrophysical problems including the line formation and the abundance determinations.

Popović, Dimitrijević and Ryabchikova (1999) present the Stark widths for three La II and six La III multiplets, and Stark widths and shifts for six Eu II lines by using the modified semiempirical approach. Also, for Eu II $\lambda = 664.505$ nm and for Eu III $\lambda = 666.635$ nm lines estimates of the electron impact widths have been performed. Data in this article are the very first Stark broadening calculations for spectral lines of ionized lanthanum and europium and first reliable data on the rare - earth elements Stark broadening, which is important in particular for the abundance analysis of CP stars. The importance of the Stark broadening effect in stellar atmospheres under different conditions has equally been considered. Stark broadening becomes significant in hot stars, and it should be taken into account in the analysis of stellar spectral lines for $T_{eff} > 7000$ K in particular if europium is overabundant.

The Au II lines are observed in Hg-Mn and other CP stars. The investigation of gold in Hg-Mn stars shows that the abundances, obtained from the Au II $\lambda = 174.0476$ nm line, are between 4000 (for χ Lup) and 20000 (for κ Cnc) times larger than solar

ones. Considering that the resonant lines of ionized heavy elements ($z \geq 30$) are located in the ultraviolet spectral region, the abundance analysis of these elements has become possible thanks to satellite observations with high resolution spectrographs as e. g. International Ultraviolet Explorer (IUE) satellite ($R = 12000$) or Goddard High Resolution Spectrograph (GHSR) installed at Hubble Space Telescope. The number of heavy ion lines observations of the higher photometric quality and spectral resolution is increasing. Consequently, experimental and theoretical spectroscopic data for modeling of these lines are required.

Popović, Dimitrijević and Tankosić (1999) presented the electron - impact broadening parameters for six Au I lines and eight Au II transitions as a function of temperature, calculated by using the semiclassical perturbation (Au I) and modified semiempirical (Au II) approach, respectively. In addition to electron - impact full halfwidths and shifts, Stark broadening parameters due to proton-, and He II-impacts have been calculated for Au I lines, for perturber densities $10^{15} - 10^{19} \text{ cm}^{-3}$ and temperatures $T = 2500 - 50000 \text{ K}$. For Au II spectral lines, the electron - impact broadening calculation has been performed within the modified semiempirical approach. Considering the very complex spectrum of Au II, the jj coupling approximation for matrix - element calculation has been used. Calculations have been performed assuming the quantities concerned to be a function of temperature for an electron density of $N_e = 10^{17} \text{ cm}^{-3}$.

In order to bring out the influence of Stark broadening mechanism for gold spectral lines in stellar plasma, Popović, Dimitrijević and Tankosić (1999) have calculated the Stark widths for Au II $\lambda = 174.0476 \text{ nm}$ through the different models of stellar atmospheres. For the case of a hot A type star, in photospheric layers the line width due to Stark broadening is one order of magnitude larger than the one due to the thermal Doppler mechanism. In higher layers of the stellar atmosphere (τ about -4) however, the thermal Doppler mechanism is more important. In the case of white dwarf atmospheres the Stark broadening mechanism is important in all layers of atmospheres and in deeper atmosphere layers the Stark width is two or three order of magnitude larger than the thermal Doppler width. For the three atmosphere models considered in this article, Stark broadening effects should be taken into account in abundance determination and other investigations of stellar plasmas.

Spectroscopic and photometric observations of two R Coronae Borealis (RCB) stars, S Apodis and RZ Normae, have been carried out by Skuljan and Cottrell (1999) during the decline phase of each of these stars. Although the declines have very different global characteristics - the depth of the decline in brightness is respectively 6 and 2 magnitudes in S Aps and RZ Nor - there are some strong similarities in the spectroscopic and photometric characteristics. The photometry shows strong reddening during the initial phase of these declines. The spectroscopy indicates that similar characteristics are observed in the NaI D region with very few other spectroscopic changes. In both declines NaI D lines show strong emission components and high velocity (blue-shifted by up to 300 km s^{-1}) absorption lines. The centre of the absorption features appears to be shifted gradually during the declines indicating the acceleration of the dust cloud.

The spectral lines observations show a variability on all time scales: from minutes to years and decades. The variations in the range from minutes to days (short - term

variations) relate to the convective motions (granulation and supergranulation) and to the solar oscillations. The variations lasting for years and decades (long - term variations) are connected with the dynamical and thermal modulation of the internal layers and are also linked to the evolution of magnetic fields over a 11 - year cycle of the Sun.

The paper of Vince (1999) presents results of spectral line variations on these two very different time scales.

The central observational program in 1999 was the one pertaining to investigations of the 11th August 1999 total Solar eclipse. In several expeditions to Horgos, Pašić lake, Kikinda, Dobanovci and Kamen Brjag in Bulgaria the majority of the staff took part.

The "Large Refractor", that is ZEISS 65/1055 cm equatorial, has been employed for micrometer and CCD(ST-6) measurements of double and multiple stellar systems (G. Popović, V. Trajkovska). Veselka Trajkovska published in Serbian Astronomical Journal results of CCD measurements of 105 double and multiple stars. On the visual telescope of the Ascania astrograph of 13,5/160 cm, photographic observations have been performed with CCD ST-6 and ST-8 cameras. During 43 nights, about 250 CCD exposures of new comets and minor planets have been secured by V. Protić-Beniček. Results of comets C/1998 M5 (LINEAR), C/1998 P1 (WILLIAMS), P/1998 U3 (JÄGER), C/1999 H1 (LEE), C/1999 S3 (LINEAR) and asteroids 1998 WS, 1240 Centenaria observations have been reported in eight IAU Circulars. On the Solar Spectrograph (ZEISS 20/302 cm equatorial), the observations of the radiation flux for 31 Solar spectral line, the measurements of their equivalent widths and the analysis of results obtained have been performed (I. Vince, L. Č. Popović, S. Erkapić, E. Bon, N. Stanić). At the Belgrade Observatory D. Jevremović performed spectral observations of RS CVn type stars in order to map active regions and Lj. Skuljan observed stars similar to the Sun.

During 1999, Miodrag Dačić defended at the Belgrade University his Ph D thesis *Analysis of the Stellar Coordinate Errors Influence on Determinations in Geodetic Astronomy*, and Darko Jevremović obtained Ph D degree at the Faculty of Sciences of the Queen's University of Belfast (North Ireland) with the thesis *Hydrogen Balmer Lines in Stellar Flares*. Predrag Jovanović obtained at Belgrade University the M. Sc. degree with the thesis entitled *The Solar Activity Influence on Earth's Rotation*.

2. EQUIPMENT AND FACILITIES

In consequence of the NATO aggression on Yugoslavia nothing could be purchased during 1999.

On 10th May 1999, during an air attack of NATO aggressors, the Large Meridian Circle and the pavilion of this instrument burnt up at about 13^h 30^m.

Repairing of damages caused by the bombardments of NATO aggressors has been performed.

3. BUDGET

INCOMES IN DINARS IN THE PERIOD JAN. - DEC. 1999

I PUBLIC INCOMES

1. From the Ministry of Science and Technology of Serbia:	
1.1 for the project "Astrometrical, Astrodynamical and Astrophysical Researches"	1 947 441.73
1.2 for the Time Keeping and Geographic Coordinate Determination Service	307 494.00
1.3 other incomes from the same Ministry	169 900.00
2. from the Federal Ministry for Development, Science and Environment Protection:	
2.1 for the project "Multidisciplinary Investigations of Current Earth Crust Movements on Yugoslav Territory"	17 000.00
2.2 support for diverse activities	65 000.00

II INCOMES FROM RENDERING SERVICES INSIDE YUGOSLAVIA

1. judiciary expertises	6 000.00
-------------------------	----------

III OTHER SPECIAL INCOMES

1. Revenues from the work market (refunds for the trainees)	54 775.66
2. Donations and Sponsorships	
2.1 "TELEKOM Srbija"	27 000.00
2.2 "DUNAV" Insurance company	5 000.00
2.3 "IMTEL" Institute for microwave technique	2 000.00
2.4 City Committee of the Socialist Party of Serbia	4 500.00
2.5 "GRMEČ" Company	5 000.00
2.6 "POTISJE" Stock Company for the Production of Building Material, Kanjiža	2 000.00
2.7 "CRVENKA" Alcohol factory, Crvenka	5 000.00
2.8 "UNION" Food industry, Sivac	2 000.00
2.9 "CERIĆ" Company	1 000.00
2.10 "JUCIT" Company	1 000.00
TOTAL (I+II+III)	2 628 386.39

EXPENDITURES

I EXPENCES ON MATERIAL, ENERGY, SPARE PARTS AND SMALL STOCKS

1. Expences on material small stocks, office stocks, sanitary stocks, journals and books	
1.1 Expences on small stocks	11 877.67
1.2 Expences on office stocks	44 490.99
1.3 Expences on sanitary stocks	16 384.01
1.4 Expences on journals and books	21 554.80
2. Expences on coal; "KOPAONIK", Beograd	5 821.40
3. Expences on electricity; "ELEKTRODISTRIBUCIJA", Beograd	35 019.06
Total	135 147.93

II EXPENDITURES ON SALARIES AND CONTRIBUTIONS CHARGING THE EMPLOYER

1. Net salaries	677 108.83
2. Taxes charging the employer	125 918.87
3. Contributions charging the employer	327 988.36
4. Annual vacation reimbursement, prizes, other supports of the staff	71 041.17
Total	1 202 057.23

III EXPENDITURES ON THE EQUIPMENT PURCHASES IN 1998

Total	0.00
-------------	------

IV EXPENDITURES ON PRODUCTIVE SERVICES

1. Post and telephone services	83 894.35
2. Public transport expences	23 836.99
3. Investments and investment maintenance of the working means	
3.1 The debt for tinsmith works on the Large Refractor dome; "RAVNICA", Beograd (M. Stojković)	32 050.00
3.2 Repairs and cleansing of cauldrons; "RAVNICA", Beograd (M. Stojković)	9 650.00

3.3 Upgrading and repairs of computer equipment, urgent interventions and maintenance of Switchboards	37 901.89
3.4 Repair of windows broken in consequence of NATO agression; "RAVNICA". Beograd (M. Stojković)	25 700.00
3.5 Recycling of the printer toner cassette	8 473.62
4. Announcements in newspapers	854.66
5. Expences on consumed water	3 205.70
6. Expences on garbage removal	9 958.83
7. Expences on photo services	10 335.69
Total	245 861.23

V EXPENDITURES ON NON PRODUCTIVE SERVICES

1. Job Contracts	192 212.54
2. Expenditures on printing of the Observatory's publications in 1998	
2.1 Serb. Astron. J. No 159; "PORTAL Co", Beograd	27 400.00
2.2 Publ. Astron. Obs. Belgrade No 63; "PORTAL Co", Beograd	22 800.00
2.4 Publ. Astron. Obs. Belgrade No 64; "PORTAL Co", Beograd	16 600.00
2.5 Publ. Astron. Obs. Belgrade No 65; "PORTAL Co", Beograd	27 900.00
3. Expenditures on printing of greetings cards "PORTAL Co", Beograd	3 755.50
4. Foreign languages courses for the staff-members	320.00
5. Expences on photocopying outside the Observatory	4 191.70
6. Expences on lawyer services	2 740.00
Total	297 919.74

VI NONMATERIAL EXPENCES

1. Transport expences on business trips	71 010.30
2. Transport to work place for the staff-members	54 265.13
3. Meals for the staff-members	112 603.70
4. Expences on XII National Conference of Yugoslav Astronomers	31 152.56

BELGRADE ASTRONOMICAL OBSERVATORY IN 1999

5. Expences for accomodation and entertainment of guests astronomers from Austria, Belarus, Bulgaria, Macedonia and Russia. 8th March and New Year marking at the Observatory and other forms of representation	76 645.31
6. Payments transactions	8 157.40
7. Membership fees	900.00
8. Taxes	2 854.06
Total	357 588.46

VII EXPENCES ON TAXES AND CONTRIBUTIONS

1. Taxes on the building plot	1 298.54
2. Social insurance contributions charging the employer	385 767.62
Total	387 066.16

GRAND TOTAL (I+II+III+IV+V+VI+VII) 2 625 640.75

Incomes - Expenditures Difference + 2 745.64

Četiri godišnja doba

(Astronomy for beginners

Four Seasons)

(M. S. Dimitrijević)

Politika, 30.07.1999, 39.

56. V. Vujin

Minut i po koji se čeka ceo vek

Od sumraka do svitanja

(The minute and a half awaited a whole century

From twilight to down)

(M. S. Dimitrijević, L. Č. Popović)

Kikindske, Kikinda, 30.07.1999, 6.

57. Biblioteka grada Beograda

Čitaonica Odeljenja umetnosti (Predavanje)

(Belgrade City Library

Lecture room of the Art department (Lecture))

(M. S. Dimitrijević, L. Vince, L. Č. Popović)

Politika, 1.08.1999, 35.

58. Slobodanka Andrić

Posle neobične pojave na jugozapadnom nebu

Verovatno je reč o bolidu

(After an unusual event in the south west sky

Probably a bolide)

(M. S. Dimitrijević)

Politika, 2.08.1999, 19.

59. M. Ivetić

Potpuno pomračenje Sunca - najneobičnija i najlepša astronomска појава

Cari nebeske predstave

(Total Solar eclipse - the most unusual and beautiful astronomical event

Charms of the celestial show)

(M. S. Dimitrijević)

Večernje novosti, 2.08.1999, pp 1 and 11.

60. Gordan Brkić

Dok je za proroke predstojeće pomračenje Sunca 11. avgusta početak kraja sveta.
naučnici najavljuju

Spektakl brzinom od 2.500 kilometara na sat

(While for soothsayers the forthcoming 11th August Solar eclipse is the beginning
of the doomsday, scientists announce

A Spectacle at a speed of 2 500 km an hour)

(M. S. Dimitrijević)

Danas, 3.08.1999, 17.

61. B. (Branka) Jakšić

Vatrena lopta koja je prošle subote obasjala Srbiju neformalno najavljuje meteorski
roj Perseida

Meteorska kiša posle pomračenja Sunca

(Fireball which lightened Serbia last Saturday, informally announces the Perseides
meteor swarm

A meteor shower after the Solar eclipse)

(M. S. Dimitrijević)

Politika Ekspres, 4.08.1999, pp. 1 and 6.

62. Slobodanka Andrić

Zasto nastaje pomračenje Sunca

Svakodnevna korist od božanstva

(Why does a Solar eclipse happen

Everyday benefit from the deity)

(I. Vince)

Politika, 4.08.1999, 20.

63. B. (Branka) Jakšić

Ni najbolje naočare nisu za gledanje bez prekida

(Even the best glasses are not to look without a break)

Milan S. Dimitrijević
Budućnost univerzuma i perspektiva razumnog života
(The future of the universe and prospects of conscious life)
Summer astronomical meetings: "Life and consciousness outside the Earth", Planetarijum, Beograd
38. 4.09.1999
Nenad Milovanović
Komunikacija sa vanzemaljskim razumom
(The communication with the extraterrestrial intellect)
Summer astronomical meetings: "Life and consciousness outside the Earth", Planetarijum, Beograd
39. 4.09.1999
Luka Ć. Popović
Planetarni sistemi oko drugih zvezda
(Planetary systems around other stars)
Summer astronomical meetings: "Life and consciousness outside the Earth", Planetarijum, Beograd
40. 11.09.1999
Milan M. Ćirković
Antropičko načelo i vanzemaljske civilizacije
(The anthropical principle and extraterrestrial civilizations)
Summer astronomical meetings: "Life and consciousness outside of Earth", Planetarijum, Beograd
41. 16.09.1999
Milan S. Dimitrijević, Vojislav Vasić, Radmilo Rončević
"Kontakt sa budućnošću"; "Zeleni sto" o ozonskom omotaču
("The contact with the future"; "The Green Table" on ozon layer)
The Belgrade city Assembly
42. 18.09.1999
Vojislava Protić-Benišek
Astrometrija i značaj posmatranja pomračenja Sunca
(Astrometry and the importance of Solar eclipse observations)
Petnica

13. 18.10.1999
Milan M. Ćirković
Kompleksnost i antropički princip
(Complexity and antropic principle)
Exploratorium, Petnica
14. 22. 10. 1999
Luka Č. Popović
Planete Sunčevog sistema
(Planets of the Solar system)
Pedagogical Academy, Vršac
15. 27.11.1999
Rodjavanje savremene kosmologije
(The birth of the modern cosmology)
16. 10.12.1999
Milan S. Dimitrijević
Astronomija na kraju dvadesetog veka
(Astronomy at the end of the twentieth century)
Narodna biblioteka (National Library) "Jovan Popović", Kikinda
17. 20.12.1999
Slobodan Jankov
Doppler Imaging of velocity fields in stellar atmospheres
Instituto de Astrofísica de Canarias
18. 23.12.1999
Luka Č. Popović
Zanimljiva Vasiona
(The interesting Universe)
Army Club (Dom armije), Zajecar

6. TV AND RADIO EMISSIONS

1. Nezvanična verzija
(Kada počinje treći milenijum)
M. S. Dimitrijević
TV BK, 15.01.1999, 21h18m-21h36m
Unofficial version
(When the third millennium starts)
M. S. Dimitrijević
TV BK, 15.01.1999, 21h18m-21h36m
2. "Chip"- Novosti u astronomskim istraživanjima (Ištvan Vince, voditelj Jožef Vereš
(József Vörös)
Radio program Novosadske televizije, 17h - 17h 30m na 90.5 MHz i 92.5 MHz,
27.01.1999.
"Chip"- News in astronomical researches Ištvan Vince, emission host Jožef Vereš
(József Vörös)
Radio program of the Novi Sad TV, 17h - 17h 30m na 90.5 MHz i 92.5 MHz,
27.01.1999.
3. NIT (Nauka i Tehnologija) magazin
(O potpunom pomračenju Sunca 11.08.1999)
M. S. Dimitrijević
TV Beograd II, 9.02.1999 22h15m
NIT (Science and Technology Magazine)
(On total Solar eclipse on 11.08.1999)
M. S. Dimitrijević
TV Beograd II, 9.02.1999 22h15m
4. Nauka i Tehnologija
(O potpunom pomračenju Sunca 11.08.1999)
M. S. Dimitrijević
TV Beograd I, 23.02.1999 21h55m
Science and Technology
(On total Solar eclipse on 11.08.1999)
M. S. Dimitrijević
TV Beograd I, 23.02.1999 21h55m
5. "Chip"- Novosti u astronomskim istraživanjima (Ištvan Vince, voditelj Jožef Vereš
(József Vörös)
Radio program Novosadske televizije, 17h - 17h 30m na 90.5 MHz i 92.5 MHz,
24.02.1999.

"Chip" - News in astronomical researches Istvan Vince, emission host Jozef Veres (József Vörös)

Radio program of the Novi Sad TV, 17h - 17h 30m na 90.5 MHz i 92.5 MHz.
24.02.1999.

6. Program za mlade

(O potpunoj pomračenju Sunca 11.08.1999)

M. S. Dimitrijević, voditelj Marija Mišić

Radio Beograd I, 8.03.1999 9h

Programme for the young

(On total Solar eclipse 11.08.1999)

M. S. Dimitrijević, emission host Marija Mišić

Radio Beograd I, 8.03.1999 9h

7. Repriza serije "Suncu naša zvezda", autor scenarija i voditelj Milan S. Dimitrijević, TV Beograd; I emisija "Priča o Suncu": 10.V.1999, II emisija "Panorama pojave na Suncu" 11.V.1999, III emisija "Atmosfera Sunca" 12.V.1999, IV emisija "Uticaj Sunca na Zemlju" 13.V.1999

Four-parts series "Sun our star", the author of scenario and emission host Milan S. Dimitrijević, TV Belgrade I: I part "Story about Sun": 10.V.1999, II part "Panorama of phenomena on the Sun" 11.V.1999, II part "Atmosphere of the Sun" 12.V.1999, IV part "Solar influence on the Earth" 13.V.1999.

8. Od 1. jula do kraja godine Miodrag Dačić je davao obdanice u Jutarnjem programu Radio Subotice

From 1 of July up to the end of the year, M. Dačić supplied data on the length of day and night, for the Morning Programme of Radio Subotica

9. Muzika koju volim

(O astronomiji i o potpunoj pomračenju Sunca 11.08.1999)

V. Protić - Benišek

TV Beograd II, 6.07.1999

Music I love

(On astronomy and on total Solar eclipse on 11.08.1999)

V. Protić - Benišek

TV Beograd II, 6.07.1999

10. Jutarnji program

(O potpunom pomračenju Sunca 11.08.1999)

I. Vince

TV BK, 7.07.1999, 7h20m

Morning Programme

(On total Solar eclipse on 11.08.1999)

I. Vince

TV BK, 7.07.1999, 7h20m

11. Repriza serije Astronomski početnica

TV Beograd I, Pogled u nebo 9. 07. 1999; Nebeske koordinate 16. 07. 1999; Merenje vremena 23. 07. 1999; Revolucija Zemlje i kalendar 30. 07. 1999; Kako su izmerene daljine do nebeskih tela 6. 08. 1999; Mesec 13. 08. 1999; Od Merkura do Jupitera 20. 07. 1999; Pogled preko stare granice 27. 08. 1999.

Reproduction of the series Astronomy for beginners

TV Belgrade 1, A look at the sky 9. 07. 1999; Celestial coordinates 16. 07. 1999; Measurement of time 23. 07. 1999; Revolution of the Earth and the calendar 30. 07. 1999; How distances to celestial bodies have been measured 6. 08. 1999; Moon 13. 08. 1999; From Mercury to Jupiter 20. 08. 1999; A look across the old border 27. 08. 1999.

12. Jutarnji program

(O potpunom pomračenju Sunca 11.08.1999)

M. S. Dimitrijević

TV Beograd I, 18.07.1999

Morning Programme

(On total Solar eclipse on 11.08.1999)

M. S. Dimitrijević

TV Beograd I, 18.07.1999

13. Jutarnji program

(O potpunom pomračenju Sunca 11.08.1999)

M. S. Dimitrijević

Radio Smederevo, 26.07.1999 9h14m

Morning Programme

(On total Solar eclipse on 11.08.1999)

M. S. Dimitrijević

Radio Smederevo, 26.07.1999 9h14m

14. Informativni program

(O potpunom pomračenju Sunca 11.08.1999)

M. S. Dimitrijević

TV Subotica, 26.07.1999 19h

Informative Programme

(On total Solar eclipse on 11.08.1999)

M. S. Dimitrijević

TV Subotica, 26.07.1999 19h

15. Telefakt,

(O potpunom pomračenju Sunca 11.08.1999, Konferencija za štaniju zajedno sa putničkom agencijom "Magelan" i sa proizvodjačem zaštitnih naočara "First production")

M. S. Dimitrijević

TV BK, 26.07.1999, 15h 55m and 18h 55m.

Telefakt

(On total Solar eclipse on 11.08.1999, Press conference jointly with the travel agency "Magelan" and the producer of protective glasses "First production")

M. S. Dimitrijević

TV BK, 26.07.1999, 15h 55m and 18h 55m.

16. Zašto tako

(O potpunom pomračenju Sunca 11.08.1999)

7.3 REVIEWING IN INTERNATIONAL JOURNALS

EARTH, MOON AND PLANETS

Zoran Knežević (1)

8. ORGANIZATION OF CONFERENCES

1. III Yugoslav Conference on Spectral Line Shapes. Brankovac (Fruška gora), 4-6.10.1999

Scientific Organizing Committee

Milan S. Dimitrijević

Istvan Vince

2. XII National Conference of Yugoslav Astronomers and International Workshop on the Development of Astronomical Databases,
Beograd, 19-21.11. 1999

Scientific Organizing Committee

Luka Č. Popović, Chairman

Milan S. Dimitrijević

Gojko Djurašević

Slobodan Jankov

Slobodan Ninković

Georgije Popović

Istvan Vince

Local Organizing Committee

Miodrag Dačić, Chairman

Edi Bon

Vesna Mijatović

Nenad Milovanović

Nataša Popović

Nataša Stanić

Vesna Živkov

Scientific Organizing Committee of the Workshop

Luka Č. Popović

Milan S. Dimitrijević

Editors of the Conference proceedings

Luka Č. Popović

Miodrag Dačić

3. Simpozijum Milanković - juče, danas, sutra,
(Symposium Milanković - Yesterday, Today, Tomorrow) Beograd, 25-26.11. 1999

Scientific Committee

Milan S. Dimitrijević
Luka Č. Popović

Organizing Committee

Edi Bon
Luka Č. Popović

9. MEMBERSHIP IN INTERNATIONAL AND NATIONAL SCIENTIFIC SOCIETIES AND BODIES

9.1. MEMBERSHIP IN INTERNATIONAL SCIENTIFIC SOCIETIES

1. International Astronomical Union

J. Arsenijević

M.S. Dimitrijević (Commissions 14, 36)

G. Djurašević

Z. Knežević (Commissions 7 (Member of the organizing committee), 15, 20)

A. Kubičela (Commission 12)

S. Ninković (Commissions 28, 33, 38)

I. Pakvor (Commission 8)

G. Popović (Commission 26)

V. Protić - Benišek (Commission 20)

S. Sadžakov (Commission 8, 19)

I. Vince (Commission 12)

2. European Astronomical Society

J. Arsenijević

Z. Ćvetković

M. Dačić

M.S. Dimitrijević

S. Ninković

L. Č. Popović

V. Protić - Benišek

S. Sadžakov

I. Vince

4. Euro-Asian Astronomical Society

M.S. Dimitrijević

G. Djurašević

S. Ninković

L. Č. Popović

5. Hungarian Astronomical Society

I. Vince

6. American Astronomical Society

M. M. Ćirković

7. American Physical Society

M. M. Ćirković

8. American Geophysical Union

D. Šulić

9. Committee of Space Research (COSPAR)

D. Šulić

10. International Working Group VLF/ELF Remote Sensing of the Ionosphere and Magnetosphere (VERSIM)

D. Šulić

11. International Association of Geomagnetism and Aeronomy (IAGA)

D. Šulić (National Correspondent)

12. International Union of Radio Science (URSI)

D. Šulić

13. Astronomische Gesellschaft

S. Ninković

S. Sadžakov

14. International Occultation Timing Association - European Section

V. Protić - Benišek

15. Astronomical Society of the Pacific

S. Ninković

16. Royal Astronomical Society of New Zealand

Lj. Skuljan

17. Spaceguard Foundation

Z. Knežević

9.2. MEMBERSHIP IN NATIONAL ASTRONOMICAL AND OTHER PROFESSIONAL SOCIETIES AND BODIES

1. Društvo astronoma Srbije (Society of astronomers of Serbia)
M. Ćirković, Secretary and member of the Presidential Board, up to 21.11.1999.
since 21.11.1999 Secretary and member of the Directorial Board
I. Vince, member of the Presidential Board up to 21.11.1999, since 21.11.1999
member of the Directorial Board
L. Č. Popović, since 21.11.1999 member of the Directorial board
2. Nacionalni komitet za astronomiju (National Committee for Astronomy)
Z. Knežević, member up to 21.11.1999, President since 21.11.1999
I. Vince, President up to 21.11.1999, member since 21.11.1999
M. S. Dimitrijević, since 21.11.1999
G. Djurašević
3. Astronomsko društvo "Rudjer Bošković" (Astronomical society "Rudjer Bošković")
M. S. Dimitrijević, President
M. Dačić, member of the Presidential Board
Z. Knežević, member of the Presidential Board
L. Č. Popović, member of the Presidential Board
V. Protić - Benišek, member of the Presidential Board
I. Vince, member of the Presidential Board
4. Odbor za matematiku, mehaniku i astronomiju Ministarstva za nauku i tehnologiju Srbije (formiran za period 1996 - 2000) Board for Mathematics, Mechanics, and Astronomy of the Ministry of Science and Technology of Serbia (for 1996-2000)
I. Vince - member
5. Serbian Society for Science Fiction
M. Ćirković - Secretary

10. VISITING DIGNITARIES AND DISTINGUISHED GUESTS AT THE ASTRONOMICAL OBSERVATORY

20.01.1999.

Milić od Mačve, painter

22.01.1999.

Berislav Kosijer, writer

13-14.02.1999.

Dr Miltcho Tsvetkov, Institute of Astronomy of the Bulgarian Academy of Sciences, Sofia, Bulgaria.

13-14.02.1999.

Dr Katja Tsvetkova, Institute of Astronomy of the Bulgarian Academy of Sciences, Sofia, Bulgaria.

12.05.1999

Dr Radivoje Mitrović, Deputy Minister for Science and Technology of the Republic of Serbia

12.10.1999

Dr Valentin M. Astashinskij, Institute of Molecular and Atomic Physics, Minsk, Belarus

18-22.11.1999

Dr Fridrich Kupka, Institute of Astronomy, Vienna, Austria

18-22.11.1999

Dr Tanya A. Ryabchik, Institute of Astronomy of Russian Academy of Sciences, Moscow, Russia

19-22.11.1999

Gordana Apostolovska, Institute of Physics, Faculty of Natural Sciences St. Cyril and Methodius, Skopje, Macedonia

19-23.11.1999

Dr Olga B. Dluzhnevskaia, Institute of Astronomy of Russian Academy of Sciences, Moscow, Russia

19-23.11.1999

Dr Oleg Yu. Malkov, Institute of Astronomy of Russian Academy of Sciences,
Moscow, Russia

19-22.11.1999

Dr Mijat Mijatović, Institute of Physics, Faculty of Natural Sciences St. Cyril and
Methodius, Skopje, Macedonia

19-22.11.1999.

Dr Kosta Y. Stavrev, Institute of Astronomy of the Bulgarian Academy of Sciences,
Sofia, Bulgaria.

19-22.11.1999.

Dr Miltcho Tsvetkov, Institute of Astronomy of the Bulgarian Academy of Sciences,
Sofia, Bulgaria.

11. THE ATTENDANCE AT SCIENTIFIC CONFERENCES

1. IAU Colloquium 175: "The Be Phenomenon in Early-Type Stars", Alicante, Spain. 28.06 - 2.07. 1999.
S. Jankov
2. IAU Colloquium 176: "The Impact of Large Scale Surveys on Pulsating Star Research", Budapest, Hungary, 8-12.08. 1999.
Lj. Skuljan
3. PhD Conference, Kecskemét, Hungary, 16-19.08. 1999.
Lj. Skuljan
4. IAU Symposium 197: "Astrochemistry: From Molecular Clouds to Planetary Systems", Sogwipo, Cheju Island, South Korea, 23-27.08. 1999.
S. Nikolić
5. 11th Cambridge Workshop on Cool Stars Stellar Systems and the Sun, Tenerife, Canarian Islands, Spain, 04-08.10. 1999.
D. Jevremović
6. III Yugoslav Conference on Spectral Line Shapes Brankovac (Fruška gora), 4-6.10. 1999
E. Bon
M. Dačić
M. S. Dimitrijević
S. Erkapić
N. Milovanović
L. Č. Popović
I. Vince
7. 31st Annual Meeting of the American Astronomical Society Division for Planetary Sciences, Padova, Italy, 10-15.10.1999
Z. Knežević (Co-chairman of the Section 24: Asteroids: Yarkovsky effect and Collisions.

8. 33 ESLAB Symposium "Star Formation from the Small to the Large Scale", Norwijk, The Netherlands, 2-5.11.1999
S. Nikolić
9. (XI Winter School of Astrophysics: Galaxies on High Red Shifts)
E. Bon
N. Stanić
10. XII National Conference of Yugoslav Astronomers and International Workshop on the Development of Astronomical Databases, Beograd, 19-21.11. 1999
J. Arsenijević
E. Bon
Z. Cvetković

M. Dačić
M. S. Dimitrijević
N. Milovanović
L. Č. Popović
V. Trajkovska

12. VISITS TO SCIENTIFIC INSTITUTIONS

1. 1.01-10.02.1999

Armagh Observatory, Armagh, Northern Ireland

D. Jevremović

2. 1.01-6.08.1999

Department of Physics and Astronomy, University of Canterbury, Christchurch, New Zealand.

Lj. Skuljan

3. 4.01-2.04.1999

Onsala Space Observatory, Sweden

S. Nikolić

4. 10.02-16.02.1999

Observatoire de Haute-Provence, Saint-Michel l'Observatoire, France

Observations of RS CVn stars with high resolution spectrograph on 1.9 m telescope

D. Jevremović

5. 17-23.02.1999

Astronomical Observatory, Vienna, Austria.

M.S. Dimitrijević

6. 15.03-1.08.1999

Armagh Observatory, Armagh, Northern Ireland

D. Jevremović

7. 25.03.1999

Nicholas Kopernik Observatory and Planetarium, Brno.

M. S. Dimitrijević

8. 6.04-2.07.1999

Observatory, University of Helsinki, Helsinki, Finland

S. Nikolić

9. J-4.05.1999
William Herschel telescope (4.2m), La Palma, Canarian Islands, Spain
High resolution spectroscopy of M dwarfs
D. Jevremović
10. 5.07-15.12.1999
Onsala Space Observatory, Sweden
S. Nikolić
11. 5.07-7.07.1999
Konkoly Observatory, Budapest, Hungary
L. Č. Popović
12. 7.07-15.08.1999
Universidad Nacional de la Plata, Facultad de Ciencias Astronomicas
y Geofisicas, La Plata, Argentina
G. Damjanović
13. 15-20.07.1999
Astronomical Observatory, Vienna, Austria.
M.S. Dimitrijević
14. 2-23.03 1999
Dipartimento di matematica, Università di Pisa, Italy
Z. Knežević
15. 1.08-31.12 1999
University of Massachusetts, Amherst, USA
V. Živkov
16. 1.10-31.12 1999
Department of Physics and Astronomy, University of Canterbury, Christchurch,
New Zealand.
Lj. Skuljan
17. 1.09-20.12 1999
Armagh Observatory, Armagh, Northern Ireland
D. Jevremović

18. 4.10-3.11.1999

Dipartimento di matematica, Universita di Pisa, Pisa, Italy

Z. Knežević

19. 15-29.10.1999

Section of Astrophysics, Astronomy and Mechanics, Department of Physics, University of Athens, Athens, Greece

G. Djurašević

20. 15.12-29.12.1999

Instituto de Astrofísica de Canarias, Spain

S. Jankov

21. 21.12-23.12.1999

Institute of Astronomy of the Bulgarian Academy of Sciences, Sofia, Bulgaria

L. Č. Popović

22. 29.12.1999 - 6.01.2000

L'Institut d'Astrophysique Spatiale, Orsay, France

S. Jankov

13. INTERNATIONAL SCIENTIFIC COLLABORATION

Argentina. Universidad Nacional de la Plata, Facultad de Ciencias Astronomicas y Geofisicas, La Plata (G.Damljanović)

Argentina, Consejo Nacional de Investigaciones Científicas y Técnicas (CONICET) (G.Damljanović)

Australia. Anglo - Australian Observatory, Epping (M. Ćirković)

Austria, Astronomical Observatory, Vienna (M. S. Dimitrijević, L. Č. Popović)

Belarus. Institute of Molecular and Atomic Physics, Minsk (Agreement on collaboration signed 15. 09. 1995)

Belarus, Scientific-Research Institute for Applied Physical Problems. of The Belarussian State University, Minsk (Agreement on collaboration signed 15. 09. 1995)

Belarus, Astronomical Observatory of The Belarussian State University, Minsk (Agreement on collaboration signed 27. 12. 1995)

Belgium. Observatoire Royale de Belgique, Uccles (V. Protić - Benišek)

Brasil. Instituto Astronomico e Geofisico - USP, Sao Paolo (S. Jankov, Z. Knežević)

Bulgaria, Institute of Astronomy of the Bulgarian Academy of Sciences, Sofia (V. Protić - Benišek, M. S. Dimitrijević, L. Č. Popović, E. Bon)

Finland. Observatory. University of Helsinki, Helsinki (S. Nikolić)

France, Observatoire de Paris, Meudon (M. S. Dimitrijević)

Germany. Max-Planck Institute, Garching (M. M. Ćirković)

Germany. University of Bonn, Bonn (S. Nikolić)

Greece. Section of Astrophysics, Astronomy and Mechanics, Department of Physics, University of Athens, Athens (G. Djurašević, M. S. Dimitrijević)

Hungary, Department of Astronomy, Eötvös Lorand University, Budapest (S. Nikolić, I. Vince)

Hungary, Konkoly Observatory, Budapest (I. Vince, S. Nikolić)

Hungary, Astronomical Observatory, Szombathely (I. Vince)

Hungary, Astronomical Observatory, Kiskunhalas (I. Vince)

Hungary, Astronomical Observatory, Baja (I. Vince)

Hungary, Astronomical Observatory, Szegedin (I. Vince)

Italy, Dipartimento di matematica, Universita di Pisa, Pisa (The Common Project "Asteroids as a Key of Understanding the Origin of the Solar System", Bilateral Protocol between Yugoslav and Italian Governments, Z. Knežević in charge on Yugoslav and A. Milani on Italian Part

Italy, Osservatorio astronomico di Brera, Milano (Z.Knežević)

Turkey. Ankara University Observatory (G. Djurašević)

Ukraine. Astronomical Observatory of Odessa State University "I.I. Mechnikov". Odessa (Agreement on collaboration, signed 27.11.1995)

Ukraine. Crimean Astrophysical Observatory. Nauchny, Crimea (Agreement on collaboration, signed 24.11.1995)

Ukraine. Mykolayiv Observatory. Mykolayiv (I. Pakvor, G. Damjanović)

USA. Department of Physics and Astronomy. University of Georgia. Athens. Georgia (D. Jevremović)

USA. State University of New York, Stony Brook, New York (M. Ćirković)

USA. University of Massachusetts. Amherst (V. Živkov)

Uzbekistan. Majdanak Observatory. Majdanak (G. Djurašević)

14. TEACHING ACTIVITY

14.1. LECTURING AT THE UNIVERSITY LEVEL

1. M. Dačić
GEODESIC ASTRONOMY
Military Technical Academy
(lectures) V year, since 1.11.1999
2. G. Damjanović
HARMONIC ANALYSIS OF TIME SERIES
Universidad Nacional de la Plata, Facultad de Ciencias Astronomicas y Geofisicas,
La Plata, Argentina
Visiting Professor (7.07 - 15.08.1999)
3. M.S. Dimitrijević
ASTRONOMICAL SPECTROSCOPY
Department of Astronomy, Mathematical Faculty
Postgraduate studies II year
4. Z. Knežević
METHODS OF CELESTIAL MECHANICS
Department of Astronomy, Mathematical Faculty
Postgraduate studies II year
5. S. Ninković
STELLAR SYSTEMS II
Department of Astronomy, Mathematical Faculty
Postgraduate studies I year
6. S. Ninković
SPECIAL COURSE ON ORBITS OF STARS IN STELLAR SYSTEMS
Department of Astronomy, Mathematical Faculty
Postgraduate studies II year
7. S. Ninković
GALACTIC ASTRONOMY
Department of Astronomy, Mathematical Faculty
Postgraduate studies II year
8. L. Č. Popović
SELECTED CHAPTERS OF EXTRAGALACTIC ASTRONOMY
Postgraduate studies II year

9. D. Šulić

PHYSICS II

Department of Geophysics, Faculty for Mining and Geology
Group for Geophysics, II year

10. I. Vince

PRACTICAL ASTROPHYSICS

Department of Astronomy, Mathematical Faculty
(lectures and exercises) III year.

11. I. Vince

METHODS AND TECHNIQUE OF OBSERVATIONS OF THE SUN

Department of Astronomy, Mathematical Faculty
Postgraduate studies II year

12. I. Vince

PRACTICAL ASTRONOMICAL SPECTROSCOPY

Department of Astronomy, Eötvös Lorand University, Budapest, Hungary
Doctoral Studies

13. I. Vince

PRACTICAL ASTROPHYSICAL SPECTROSCOPY

Department of Astronomy, Mathematical Faculty
Doctoral studies.

14.2. Ph. D. AND M. Sc. THESES

1. Branimir Blagojević

ŠIRENJE I POMERAJ ANALOGNIH SPEKTRALNIH LINIJA JONA U PLAZMI DUŽ IZOELEKTRONSKIH NIZOVA
BROADENING AND SHIFT OF ANALOGOUS IONIC SPECTRAL LINES IN PLASMA ALONG ISOELECTRONIC SEQUENCES

Ph. D. Thesis, Belgrade University, Faculty of Physics, 6.07.1999
(M. S. Dimitrijević, Member of the Board)

2. Predrag Jovanović

UTICAJ SUNČEVE AKTIVNOSTI NA ZEMLJINU ROTACIJU
THE INFLUENCE OF SOLAR ACTIVITY ON THE EARTH'S ROTATION
M. Sc. Thesis, Belgrade University, Faculty of Mathematics, 25.11.1999
(I. Vince, Member of the Board)

**15. SUPPLEMENT TO THE 1995 LIST OF
INSTITUTIONS RECEIVING SERBIAN ASTRONOMICAL
JOURNAL AND PUBLICATIONS OF THE
ASTRONOMICAL OBSERVATORY OF BELGRADE**

MACEDONIA

Library of the Macedonian Academy of Sciences and Arts, Skopje, Makedonija

Narodna i univerzitetska biblioteka "Goce Delčev", Skopje, Makedonija

ROMANIA

Romanian Academy, Editorial Committee of Studii și Cercetări de Geofizică" and
"Revue Roumaine de Géophysique", Bucharest, Romania

RUSSIA

Russian State Library (RGB), Moskva, Russia

SLOVENIA

Univerzitetska knjižnica, Maribor, Slovenia

YUGOSLAVIA

Grupa za astronomiju Društva istraživača "Vladimir Mandić - Manda", Valjevo, Yugoslavia

16. BELGRADE ASTRONOMICAL OBSERVATORY STAFF AND ORGANISATION

WINNERS OF THE ASTRONOMICAL OBSERVATORY PRIZE FOR 1999

1. Prize for Science
ANATOLIJ MIHAJLOV
2. Prize for Science for Young
MILAN ĆIRKOVIĆ
3. Prize for the Contribution to the Development of the Astronomical Observatory (for
fellows of Astronomical Observatory)
LUKA Č. POPOVIĆ
4. Prize for the Contribution to the Development of the Astronomical Observatory
ISTRAŽIVAČKA STANICA (RESEARCH STATION) "PETNICA"

DIRECTOR

Milan S. Dimitrijević

DIRECTORIAL BOARD

Dragan Popović - President
Luka Popović - Vice President
Zoran Bojanić
Miroljub Ignjatović
Slobodan Jankov
Nebojša Petrović
Georgije Popović
Ištván Vince

JOINT SCIENTIFIC COUNCIL OF ASTRONOMICAL OBSERVATORY, GEO-MAGNETIC INSTITUTE AND SEISMOLOGICAL INSTITUTE

Milan S. Dimitrijević - President
Slobodan Ninković - Vice President
Olga Atanacković - Vukmanović
Ljiljana Cander
Stevan Djeniže
Aleksandar Djordjević
Gjoko Djurašević

BELGRADE ASTRONOMICAL OBSERVATORY IN 1999

Davorka Grubor
Slobodan Jankov
Zoran Knežević
Aleksandar Kubičela
Anatolij A. Mihajlov
Georgije Popović
Sofija Sadžakov
Božidar Stanić
Desanka Šulić
Ištván Vince

SCIENTIFIC COUNCIL OF ASTRONOMICAL OBSERVATORY

Ištván Vince - President
Gjoko Djurašević - Vice President
Milan S. Dimitrijević
Slobodan Jankov
Zoran Knežević
Slobodan Ninković
Georgije Popović
Luka Č. Popović
Desanka Šulić, up to 1. 11. 1999

STAFF AND ORGANISATION OF ASTRONOMICAL OBSERVATORY IN 1999

Dr Milan S. Dimitrijević (Director)

SCIENTIFIC DIVISION

DEPARTMENT FOR ASTROPHYSICS

Dr Ištván Vince (Head of Department)
Dr Milan S. Dimitrijević
Dr Gjoko Djurašević
Dr Slobodan Jankov
Dr Darko Jevremović, Ph. D. since 25.11.1999
Dr Luka Č. Popović
Dr Desanka Šulić, up to 1.11.1999
M.Sc. Milan Ćirković
M.Sc. Sanja Erkapić
M.Sc. Silvana Nikolić
M.Sc. Ljiljana Skuljan
M.Sc. Dragana Tankosić
Edi Bon
Snežana Marković-Kršljanin
Nenad Milovanović, since 20.01.1999

Nataša Stanić
Oliver Vince, since 1.12.1999

DEPARTMENT FOR DYNAMICAL ASTRONOMY

Dr Georgije Popović (Head of Department)
Dr Zoran Knežević
Dr Slobodan Ninković
M.Sc. Dragomir Olević
M.Sc. Rade Pavlović
M.Sc. Vojislava Protić - Benišek
Veselka Trajkovska
Vesna Živkov

DEPARTMENT FOR ASTROMETRY

Dr Miodrag Dačić (Head of Department since 1.04.1999), Ph.D. since 27.10.1999
M.Sc. Predrag Jovanović, M.Sc. since 25.11.1999
M.Sc. Ivan Pakvor (Head of Department up to 31.03.1999).
M.Sc. Zorica Cvetković
Natasa Popović

LIBRARY

Vesna Mijatović (librarian)
Milan Radovanac (archivist) since 1.04.1999

PROFESSIONAL SERVICES DIVISION

TIME KEEPING AND GEOGRAPHIC COORDINATES DETERMINATION SERVICE

M.Sc Goran Damjanović (Head of The Service)
M.Sc Bora Jovanović
Djuro Bozicković

GENERAL AND PERSONAL SERVICES DIVISION

GENERAL AND PERSONAL SERVICE

Sreten Stepanović (Secretary - Head of The Service)
Gordana Gajić (Technical secretary)
Stajka Novaković (telephonist)
Jelena Pešić (maintenance)

BELGRADE ASTRONOMICAL OBSERVATORY IN 1999

ACCOUNT - KEEPING SERVICE

Slavica Pavić (Head of Service)

Gordana Dakić (bookkeeper – accountant)

TECHNICAL SERVICE

Vladimir Savković (electrotechnician)

ПУБЛИКАЦИЈЕ АСТРОНОМСКЕ ОПСЕРВАТОРИЈЕ У БЕОГРАДУ
PUBLICATIONS OF THE ASTRONOMICAL OBSERVATORY OF BELGRADE

№. 1 (1947)

ЕФЕМЕРИДЕ 98 МАЛИХ ПЛАНЕТА ЗА 1947 ГОДИНУ;
ÉPHÉMÉRIDES DE 98 DES PETITES PLANÈTES POUR L'AN 1947

№. 2 (1947)

ЕФЕМЕРИДЕ 106 МАЛИХ ПЛАНЕТА ЗА 1948 ГОДИНУ;
ÉPHÉMÉRIDES DE 106 DES PETITES PLANÈTES POUR L'AN 1948

№. 3 (1949)

ЕФЕМЕРИДЕ 106 МАЛИХ ПЛАНЕТА ЗА 1949 ГОДИНУ;
ÉPHÉMÉRIDES DE 106 DES PETITES PLANÈTES POUR L'AN 1949

№. 4 (1951) P. M. Djurković, B. M. Ševarlić et Z. M. Brkić,
ОДРЕЂИВАЊЕ ГЕОГРАФСКЕ ШИРИНЕ АСТРОНОМСКЕ ОПСЕРВАТОРИЈЕ У БЕОГРАДУ, 1947;
DETERMINATION DE LATITUDE DE L'OBSERVATOIRE ASTRONOMIQUE DE BELGRADE, 1947

№. 5 (1957) B. M. Ševarlić,

SUR LE PROBLÈME DE LA VARIATION DES LATITUDES ET DU MOUVEMENT DU PÔLE INSTANTANÉ DE ROTATION À LA SURFACE DE LA TERRE

№. 6 (1961) Ljubiša A. Mitić,

COOSCILLATIONS DES PENDULES ASTRONOMIQUES

№. 7 (1961) Zaharije M. Brkić

ПРИЛОГ ИСПИТИВАЊИМА СИСТЕМАЦКИХ УТИЦАЈА НА АСТРОНОМСКО ОДРЕЂИВАЊЕ ВРЕМЕНА;
CONTRIBUTION AUX ÉTUDES DES INFLUENCES SYSTÉMATIQUES À LA DÉTERMINATION ASTRONOMIQUE DE L'HEURE

№. 8 (1961) B. M. Ševarlić,

ПРОМЕНЕ ГЕОГРАФСКЕ ШИРИНЕ АСТРОНОМСКЕ ОПСЕРВАТОРИЈЕ У БЕОГРАДУ ОД 1949.0 - 1957.0;
VARIATIONS DE LA LATITUDE DE L'OBSERVATOIRE ASTRONOMIQUE DE BEOGRAD DE 1949.0 - 1957.0

№. 9 (1961) Branislav M. Ševarlić,

PRÍLOG ISPITIVANJU PROMENA GEOGRAFSKIH ŠIRINA BEOGRADA;

CONTRIBUTION A L'ETUDE DES VARIATIONS DE LA LATITUDE DE BEOGRAD

№. 10 (1964) Vasilije Oskanjan,
THE UV CETI VARIABLE STARS

№. 11 (1965) P. M. Djurković, M. Protić, J. Arsenijević, A. Kubičela, O. Kovačević, R. Grujić, Lj. Dačić, M. Djokić, Č. Ćepinac,
OBSERVATIONS DU SOLEIL EN 1957, 1958 ET 1959 A L'OBSERVATOIRE ASTRONOMIQUE DE BEOGRAD

№. 12 (1968) Editor : P. M. Djurković,

SIMPOZIJUM ASTRONOMA JUGOSLAVIJE POVODOM 75. GODIŠNICE OSNIVANJA ASTRONOMSKE OPSERVATORIJE U BEOGRADU (1887 - 1962)

№. 13 (1967) G. Teleki,

A CONTRIBUTION INTO THE RESEARCH OF ASTRONOMICAL REFRACTION AND ITS ANOMALIES ON THE BASIS OF AEROLOGICAL MEASUREMENTS CARRIED OUT IN BEOGRAD

No. 14 (1968)

RADOVI NA ISPITIVANJU FUNDAMENTALNIH ASTROMETRIJSKIH INSTRUMENATA, NJIHOVIH ORGANA I PRIBORA;
TRAVAUX SUR L'EXAMEN DES INSTRUMENTS ASTROMETRIQUES FONDAMENTAUX, DE LEUR ORGANES ET ACCESSOIRES

No. 15 (1968) Aleksandar Kubičela

UNE MODIFICATION DU SPECTROGRAPHE CHROMOSPHERIQUE A PLAQUE MOBILE

No. 16 (1969) Editor : P. M. Djurković,

RADOVI PRIKAZANI NA IV KONGRESU MATEMATIČARA, FIZIČARA I ASTRONOMA, OKTOBRA 1965 U SARAJEVU

No. 17 (1972) Sofija N. Sadžakov, Dušan P. Šaletić,

CATALOGUE OF DECLINATIONS OF THE LATITUDE PROGRAMME STARS (KŠZ)

No. 18 (1974) Editor : G. Teleki,

THE PRESENT STATE AND FUTURE OF THE ASTRONOMICAL REFRACTION INVESTIGATIONS,

Proceedings of the Study Group on Astronomical Refraction of the International Astronomical Union Commission 8

No. 19 (1974) Georgije M. Popović,

THE FIRST GENERAL CATALOGUE OF DOUBLE-STAR OBSERVATIONS MADE IN BELGRADE, 1951–1971

No. 20 (1975) Editor : Dj. Teleki,

ZBORNIK RADOVIMA NACIONALNE KONFERENCIJE JUGOSLOVENSKIH ASTRONOMA – 1973, BEOGRAD;

PROCEEDINGS OF THE NATIONAL CONFERENCE OF YUGOSLAV ASTRONOMERS – 1973, BELGRADE

No. 21 (1975) S. Sadžakov, D. Šaletić,

DECLINATIONS AND THE PROPER MOTIONS OF THE STARS OF THE INTERNATIONAL LATITUDE SERVICE ON THE BASIS OF MERIDIAN CATALOGUES FROM 1929 TO 1972.

No. 22 (1975) Ivan Pakvor,

ISPITIVANJE NAGLAVAKA VELIKOG PASAŽNOG INSTRUMENTA ASTRONOMSKE OPSERVATORIJE U BEOGRADU;

PIVOT-EXAMINATIONS OF BELGRADE OBSERVATORY'S LARGE TRANSIT INSTRUMENT

No. 23 (1975) Lj. A. Mitić,

PRIPREMNI RADOVI NA VELIKOM PASAŽNOM INSTRUMENTU BEOGRADSKE OPSERVATORIJE;

PREPARATION OF THE LARGE TRANSIT INSTRUMENT OF THE BELGRADE OBSERVATORY FOR REGULAR OBSERVATION

No. 24 (1978) Sofija N. Sadžakov,

IZVEDENI KATALOG ŠIRINSKIH ZVEZDA (IKŠZ);

GENERAL CATALOGUE OF LATITUDE STARS (IKŠZ)

No. 25 (1978) Danilo J. Zulević,

PRILOG STATISTIČKOM ISPITIVANJU UTICAJA ODNOSA MASA KOMPONENTA NA DINAMIČKE PUTANJSKE ELEMENTE (e, P, a) KOD VIZUELNO DVOJNIH ZVEZDA;

STATISTICAL INVESTIGATION OF THE RELATION BETWEEN THE MASS RATIO AND THE DYNAMICAL ORBITAL ELEMENTS e, P, a OF THE VISUAL BINARIES

No. 26 (1979) Editor : Dj. Teleki.

ZBORNIK RADOVA III NACIONALNE KONFERENCIJE JUGOSLOVENSKIH ASTRONOMA, BEOGRAD, 1977.;

PROCEEDINGS OF THE III NATIONAL CONFERENCE OF YUGOSLAV ASTRONOMERS, BELGRADE, 1977.

No. 27 (1979) S. N. Sadžakov,

ISPITIVANJE SISTEMATSKIH GREŠAKA TIPO $\Delta\delta_\alpha$ ŠIRINSKIH POSMATRANJA RAZNIH OPSERVATORIJA NA OSNOVU NJIHOVOG UPOREDJIVANJA SA BEOGRADSKIM IZVEDENIM KATALOGOM ŠIRINSKIH ZVEZDA I FOTOGRAFSKIM KATALOGOM AGK3;

INVESTIGATION OF THE SYSTEMATIC $\Delta\delta_\alpha$ - TYPE ERRORS IN LATITUDE OBSERVATIONS OF VARIOUS OBSERVATORIES BY THEIR COMPARISON WITH BELGRADE GENERAL CATALOGUE OF LATITUDE STARS AND THE PHOTOGRAPHIC CATALOGUE AGK3

No. 28 (1980) Jelisaveta Arsenijević.

POLARIZACIJA ZRAČENJA NEKIH HLADNIH SUPERDŽINOVА

No. 29 (1982) Editors : G. Teleki, B. Ševarlić,

EPITOME FUNDAMENTORUM ASTRONOMIAE, Pars II,

Photographic Catalogues and Charts of Star Positions

No. 30 (1981) S. N. Sadžakov, D. P. Šaletić, M. D. Dačić,

KATALOG ZVEZDA PROGRAMA SFZT;

CATALOGUE OF NPZT PROGRAMME STARS

No. 31 (1981)

ASTROKLIMATSKA ISTRAŽIVANJA ZA IZBOR MESTA VISINSKE STANICE ASTRONOMSKE OPSERVATORIJE U BEOGRADU;

ASTROCLIMATIC EXPLORATIONS FOR SITE SELECTION OF THE HIGH ALTITUDE STATION OF THE BELGRADE OBSERVATORY

No. 32 (1984) Vojislava Protić-Benišek,

MERKUROVI PROLAZI I PARALAKSA SUNCA;

TRANSITS OF MERCURY AND SOLAR PARALLAX

No. 33 (1985) Editor : G. M. Popović.

ZBORNIK RADOVA VI NACIONALNE KONFERENCIJE JUGOSLOVENSKIH ASTRONOMA, HVAR, 1983.;

PROCEEDINGS OF THE VI NATIONAL CONFERENCE OF YUGOSLAV ASTRONOMERS, HVAR, 1983

No. 34 (1986) Božidar Popović.

EQUATIONS DES PERTURBATIONS DES ELEMENTS HELIOCENTRIQUES VECTOIELS DES ORBITES DES PETITES PLANETES ET COMÈTES

No. 35 (1987) Editor : G. Teleki,

PROCEEDINGS OF THE WORKSHOP ON REFRACTION DETERMINATION IN THE OPTICAL AND RADIO ASTROMETRY, LENINGRAD, USSR, 1985

No. 36 (1989)

STO GODINA ASTRONOMSKE OPSERVATORIJE U BEOGRADU

No. 37 (1989) Vladimir Kršljanin.

ŠTARKOV POMAK JONSKIH LINIJA KOD TOPLIH ZVEZDA;

ION LINES STARK SHIFTS IN SPECTRA OF HOT STARS

No. 38 (1990) S. N. Sadžakov, M. D. Dačić.

BEOGRADSKI KATALOG DVOJNIH ZVEZDA;

BELGRADE CATALOGUE OF DOUBLE STARS

No. 39 (1990) Milan S. Dimitrijević,

ISTRAŽIVANJA OBLIKA SPEKTRALNIH LINIJA U JUGOSLAVIJI 1962 - 1985.

(Bibliografija i indeks citata);

LINE SHAPES INVESTIGATIONS IN YUGOSLAVIA 1962 - 1985,

(Bibliography and citation index)

No. 40 (1990) Editors : G. Teleki and B. Ševarlić,

EPITOME FUNDAMENTORUM ASTRONOMIAE, Pars III.

Parallaxes, Proper Motions and Radial Velocities

No. 41 (1991) Milan S. Dimitrijević,

ISTRAŽIVANJE OBLIKA SPEKTRALNIH LINIJA U JUGOSLAVIJI II (1985 - 1989).

(Bibliografija i indeks citata);

LINE SHAPES INVESTIGATIONS IN YUGOSLAVIA II (1985 - 1989),

(Bibliography and Citation Index)

No. 42 (1991) Gojko Djurašević,

ISPITIVANJE AKTIVNIH TESNIH DVOJNIH SISTEMA NA OSNOVU FOTOMETRJSKIH MERENJA;

INVESTIGATION OF ACTIVE CLOSE BINARIES BASED ON PHOTOMETRIC MEASUREMENTS

No. 43 (1992) Editors : O. Atanacković-Vukmanović and M. S. Dimitrijević,

Astronomski opservatorija u Beogradu,

AKTIVNOSTI I KRATKI SADRŽAJI RADOVA 1980 - 1990;

Astronomical Observatory in Belgrade,

ACTIVITIES AND ABSTRACTS OF PAPERS 1980 - 1990

No. 44 (1993) Editors : M. S. Dimitrijević and D. Djurović,

ZBORNIK RADOVA X NACIONALNE KONFERENCIJE JUGOSLOVENSKIH ASTRO-NOMA, 22 - 24 SEPTEMBER 1993;

PROCEEDINGS OF THE X NATIONAL CONFERENCE OF YUGOSLAV ASTRONOMERS, BELGRADE, SEPTEMBER 22 - 24, 1993

No. 45 (1993) B. Jovanović, L. Djurović, M. Jovanović,

HOMOGENIZOVANI SISTEM UTBLI ZA PERIOD 1964 - 1986;

HOMOGENEOUS SYSTEM UTBLI FOR 1964 - 1986

No. 46 (1994) Luka Č. Popović,

STARKOVО ŠIRENJE SPEKTRALNIH LINIJA TEŠKIH JONA U SPEKTRIMA TOPLIH ZVEZDA;

STARK BROADENING OF HEAVY ION SPECTRAL LINES IN SPECTRA OF HOT STARS

No. 47 (1994) Milan S. Dimitrijević,

ISTRAŽIVANJE OBLIKA SPEKTRALNIH LINIJA U JUGOSLAVIJI I SRBIJI III (1989 - 1993),

(Bibliografija i indeks citata);

LINE SHAPES INVESTIGATIONS IN YUGOSLAVIA AND SERBIA III (1989 - 1993),

(Bibliography and citation index)

No. 48 (1995) Editors : O. Atanacković-Vukmanović and M. S. Dimitrijević,

ISTRAŽIVANJA U ASTRONOMIJI I;

RESEARCHES IN ASTRONOMY I

No. 49 (1995) Editors : I. Vince, M. S. Dimitrijević and L. Balázs,

PROCEEDINGS OF THE FIRST HUNGARIAN-YUGOSLAV ASTRONOMICAL CONFERENCE,

April 26 - 27, 1995, Baja Hungary

No. 50 (1995) Editors : M. S. Dimitrijević and L. Č. Popović,
PROCEEDINGS OF THE FIRST YUGOSLAV CONFERENCE ON SPECTRAL LINE
SHAPES,
September 11–14, 1995, Krivaja, Yugoslavia

No. 51 (1996) Editors : M. S. Dimitrijević and L. Č. Popović,
Астрономска Опсерваторија у Београду.
АКТИВНОСТИ И КРАТКИ САДРЖАЈИ РАДОВА (1991 – 1995);
Astronomical Observatory in Belgrade.
ACTIVITIES AND ABSTRACTS OF PAPERS (1991 – 1995)

No. 52 (1996) Milan S. Dimitrijević,
БЕОГРАДСКА АСТРОНОМСКА ОПСЕРВАТОРИЈА У 1995;
BELGRADE ASTRONOMICAL OBSERVATORY IN 1995

No. 53 (1996) Editors : V. S. Burakov and M. S. Dimitrijević,
PROCEEDINGS OF THE FIRST BELARUSSIAN-YUGOSLAVIAN SYMPOSIUM ON
PHYSICS AND DIAGNOSTICS OF LABORATORY & ASTROPHYSICAL PLASMA.
July 1 – 3, 1996, Minsk, Belarus,
In memoriam of M. A. Elyashevich, academician of Belarus AS

No. 54 (1996) Editors : M. Vukićević-Karabin and Z. Knežević,
ЗБОРНИК РАДОВА XI НАЦИОНАЛНЕ КОНФЕРЕНЦИЈЕ ЈУГОСЛОВЕНСКИХ
АСТРОНОМА,
Београд, 9 – 11, октобар 1996;
PROCEEDINGS OF THE XI NATIONAL CONFERENCE OF YUGOSLAV ASTRONO-
MERS.
Belgrade, October 9 – 11, 1996

No. 55 (1997) Milan S. Dimitrijević,
БЕОГРАДСКА АСТРОНОМСКА ОПСЕРВАТОРИЈА У 1996;
BELGRADE ASTRONOMICAL OBSERVATORY IN 1996

No. 56 (1997) Editors : M. S. Dimitrijević, J. Milogradov-Turin and L. Č. Popović,
РАЗВОЈ АСТРОНОМИЈЕ КОД СРБА;
DEVELOPMENT OF ASTRONOMY AMONG SERBS

No. 57 (1997) Editors : Luka Č. Popović and Milivoje Ćuk,
PROCEEDINGS OF THE SECOND YUGOSLAV CONFERENCE ON SPECTRAL LINE
SHAPES.
September 29 - October 2, 1997, Bela Crkva, Yugoslavia

No. 58 (1997) Milan S. Dimitrijević,
LINE SHAPES INVESTIGATIONS IN YUGOSLAVIA AND SERBIA IV (1993 – 1997).
(Bibliography and citation index);
ИСТРАŽIVANJE ОБЛИКА СПЕКТРАЛНИХ ЛИНИЈА У ЈУГОСЛАВИЈИ И СРБИЈИ IV,
(1993 – 1997) (Bibliografija i indeks citata)

No. 59 (1998) Milan S. Dimitrijević,
БЕОГРАДСКА АСТРОНОМСКА ОПСЕРВАТОРИЈА У 1997;
BELGRADE ASTRONOMICAL OBSERVATORY IN 1997

No. 60 (1998) Editors : M. S. Dimitrijević and L. Č. Popović,
PROCEEDINGS OF THE 4th YUGOSLAV-ROMANIAN ASTRONOMICAL MEETING.
(4th YuRoAM)

No. 61 (1998) Editors : M. S. Dimitrijević and V. S. Burakov,
PROCEEDINGS OF THE 2nd YUGOSLAV - BELARUSSIAN SYMPOSIUM ON PHYSICS & DIAGNOSTICS OF LABORATORY & ASTROPHYSICAL PLASMAS,
September 5-6, 1998, Zlatibor, Yugoslavia

No. 62 (1998) M. S. Dimitrijević,
АСТРОНОМСКА СПЕКТРОСКОПИЈА;
ASTRONOMICAL SPECTROSCOPY

No. 63 (1999) Milan S. Dimitrijević,
БЕОГРАДСКА АСТРОНОМСКА ОПСЕРВАТОРИЈА У 1998;
BELGRADE ASTRONOMICAL OBSERVATORY IN 1998

No. 64 (1999) Editors : Milan S. Dimitrijević, Luka Č. Popović and Milcho Tsvetkov,
PROCEEDINGS OF THE FIRST BULGARIAN-YUGOSLAV ASTRONOMICAL MEETING

No. 65 (1999) Editors : Luka Č. Popović and Miodrag Dačić.
ЗВОРНИК РАДОВА XII НАЦИОНАЛНЕ КОНФЕРЕНЦИЈЕ ЈУГОСЛОВЕНСКИХ АСТРОНОМА И МЕЂУНАРОДНОГ СКУПА О РАЗВОЈУ АСТРОНОМСКИХ БАЗА ПОДАТАКА;
PROCEEDINGS OF THE XII NATIONAL CONFERENCE OF YUGOSLAV ASTRONOMERS AND INTERNATIONAL WORKSHOP ON THE DEVELOPMENT OF ASTRONOMICAL DATABASES

No. 66 (1999) Editors : M. S. Dimitrijević, J. Purić and V. S. Burakov,
INVITED LECTURES OF THE 2nd YUGOSLAV - BELARUSIAN SYMPOSIUM ON PHYSICS & DIAGNOSTICS OF LABORATORY & ASTROPHYSICAL PLASMAS,
September 5-6, 1998, Zlatibor, Yugoslavia

No. 67 (2000) Editors : Milan S. Dimitrijević, Luka Č. Popović and Milcho Tsvetkov,
ЗВОРНИК РАДОВА ДРУГОГ СРПСКО - БУГАРСКОГ АСТРОНОМСКОГ СУСПЕТА,
Јун 23-26, Зајечар, Србија;
PROCEEDINGS OF THE SECOND SERBIAN - BULGARIAN ASTRONOMICAL MEETING,
Jun 23-26, Zaječar, Srbija

No. 68 (2000) Editors : V. S. Burakov and M. S. Dimitrijević,
III BELARUSIAN - YUGOSLAV SYMPOSIUM ON PHYSICS AND DIAGNOSTICS OF LABORATORY AND ASTROPHYSICAL PLASMAS,
September 17-21, 2000, Minsk, Belarus

No. 69 (2000) Milan S. Dimitrijević,
БЕОГРАДСКА АСТРОНОМСКА ОПСЕРВАТОРИЈА У 1999;
BELGRADE ASTRONOMICAL OBSERVATORY IN 1999
