

THE SHARE OF ASTRONOMICAL OBSERVATORY IN BELGRADE IN CONSTRUCTION OF HVAR OBSERVATORY AND THEIR LATER COLLABORATION

Based on archival material of Astronomical Observatory of Belgrade, minutes, reports, plans, letters, rule books ... in this work we reconstructed its role in the formation of the Observatory on the island of Hvar, from the ancient origins of such ideas, in twenties of the last century, through specific plans and actions for its realization from the mid-sixties, then intensive cooperation until the end of the eighties, when such cooperation simply disappeared. We'll see how the idea of building developed, who were all its initiators, its realization with a third participant, Ondřejev observatory from Czechoslovakia, relations of institutions and individuals in building, and then cooperation, results and problems, and reasons for its cancellation.
