

COSMICAL AND HISTORY OF CULTURE AND CIVILIZATION

The paper presents considerations about space in interdisciplinary research on the cosmos from the beginning to the rise of the earliest civilizations, with emphasis on the modern age. Accentuated is the vision on cosmical questions in the leading civilizations, starting from 6000 years and earlier, until our time.

Mythological versions on the universe point to an important man's preoccupation for millennia. We analyzed and early works and interpreted considerations of testimonies of the creative spirit from the earliest civilizations. In the reality of life of our distant ancestors and in the symbolism of the rich cultural heritage of ancient civilizations, with a reflex to the present and the future of world heritage, the gods are imagined as masters of the sky
