

VERA ERCEG

Astronomer Vera Erceg (Marić) is, on the fate of life, especially when women are concerned, the special case on the Astronomical Observatory of Belgrade. Relatively successful professional and scientific career, the disease was first significantly slowed, and then cruelly cut in 51 years of age. This was a loss, in particular for the Group for the binary stars, where she worked. Her intention to finish a PhD, on what she worked, failed to realize.
