

INTERNATIONAL PROJECTS FOR PROMOTION OF ASTRONOMY IN SERBIA

In this paper, we present examples of successful projects of Citizen Science, which are being implemented or will be implemented in Serbia. These projects allow a large number of astronomy enthusiasts to get actively involved in astronomical research or promotion of astronomy. Also educational institutions can use them as a great tool for teaching. For schools we recommend that these activities be involved in astronomical, geographical, ecological and sections of physics. In the context of this paper we presented projects: World Space Week, International Observe the Moon Night, Planet Hunters, Asteroid Day, Globe at Night, and Charlie Bates Solar Astronomy Project.

Key words: Citizen Science, World Space Week, International Observe the Moon Night, Planet hunters, Asteroid day, Globe at night, Charlie Bates Solar Astronomy Project
